PROJECTS

Student Management System

- Implemented basic concepts of C++.
- It allows administrators to add, update, search, delete and retrieve student records and course information.
- It efficiently stores student records, utilizing concepts such as arrays, and file handling.
- Calculates and store student grades and generate reports for administrative purposes.

College Admission System

- Created it using basic concepts of Java OOP and database.
- It allows applicants to submit their information, view admission requirements, and check their application status.
- Integrated a database to store applicant details securely and enable efficient retrieval of information.

Auto Parts Shop

- Implemented basic concepts of HTML and CSS.
- It was a simple website that helps users to buy the auto parts for their vehicles.

Clothing Store Management

- Implementing data structures and filing systems for organized data storage and retrieval.
- Allow administrators to add new clothing items , update information and stock levels for existing clothing items
- Provide administrators with reports on sales and maintain a history of customer orders
- Allow customers to add items to cart and view cart.
